

THE EXPERIMENT

Objective:- We aim to rank newly purchased national websites to get to the 1st page of Google within six months by using advanced data analytics and business intelligence applications. We are inviting participants to follow the ranking and progress state by state. When we reach the 1st page, the websites can generate leads and client inquiries.

Why this project

Many companies charge between \$2,000 to \$15,000 monthly for Google Ads and Web development, and clients complain they are not getting value for money.

By ranking organically and charging an average of 70% less than our competitors, our technical skills have been a game changer; now, we are offering this opportunity to a new set of clients.

How do I verify

We invite you to take part in our experiment. There is no financial outlay. After you register, you will gain access to our portal, where you can view the process and follow verifiable progress. OR you can opt for a monthly email update report.

- In the portal, you will find the domains purchased in 2023 promoted monthly.
- You can also manually check the Google ranking of the keywords on Google to verify.

WORK WITH US

Our experiment allows you to monitor and assess how we work and service clients' websites. If you are impressed with our work, transparency, and progress and want us to develop your website or rank your existing websites with our client acquisition strategy.

You can engage us or refer to other clients. We offer several packages to suit varying budgets and only require a 3-month commitment and month-to-month after that.
